New ProPress XL-C joins up to 4" tubing in as little as four seconds

Ridge Tool and VIEGA continue to enhance the world's best copper pressing system. ProPress XL-C, for 2-1/2"-4" copper tubing, delivers the speed and reliability of ProPress – now with the addition of increased efficiency and flexibility.

New highly engineered XL-C copper press fittings are lightweight and feature the patented stainless steel grip ring that provides exceptional strength, exceeding that of a solder connection.

The new V2 Actuator jaw swivels 180° with the new XL-C Press Rings. This allows connections to be made at any angle relative to the tubing, greatly increasing access in tight spaces.

ProPress is the fastest way to join 1/2" to 4" tubing – less than 7 seconds for a joint. To learn more or to schedule a demonstration of new XL-C rings, fittings and actuator, contact Ridge Tool at 800-769-7743, www.ProPressSystem.com.
